

The core of the wireless, room-to-room network of Nuvo's wireless players, the Gateway connects to a home router and uses the latest Wi-Fi protocol to reliably send music, from your home network or Internet Radio, to multiple players throughout your system. Outside North America? Use -EU, -UK or -AU when ordering.

Features & Benefits

The Gateway allows all of your players to talk to each other, share audio content, initiate commands, and even play the same content through every zone, all in perfect sync. Just connect to your home router and the system automatically streams audio from the internet to your players, without any fuss or hassle.

Using the state-of-the-art wireless protocol, 802.11n, the Nuvo system can deliver faster more robust signal transmission. That means your music is constantly streaming. Concurrent use of both 2.4 and 5.6 Ghz bands allows the system to avoid interference. That means your music never stops or hiccups.

Wireless "n" technology offers the most broad range signal capability, to send music throughout your entire home, and even outside areas.

Specifications

General Info

UPC Number	701963853084
Countries Of Origin	China
Product Line	Nuvo
Application Sector	Residential
Standard	FCC, IC, CE-EMC, C-Tick, cULus, GS Mark, CE-LVD, RoHS

Technical Information

Number of Fibers	Ethernet RJ45 10/100/1000, Wireless: 2 TX x 2 RX MIMO, IEEE 802.11a/b/g/n
Network	LAN - Ethernet, Wireless
Power Supply	12
Connector	RJ45
Security	WPA2/256-bit encryption
Environmental Conditions	10 to 90 (relative humidity, non-condensing) pct
