

Vantage RadioLink Dimmer

Part No. RDU14XE-LWNA

The RadioLink® EasyTouch II ScenePoint dimmer is a wallbox dimmer with contemporary aesthetics and functionality that complements each project design. Available in one through fivebutton configurations, EasyTouch II's custom color palette allows designers to match or mix finishes for trims, buttons, and faceplates. Buttons feature full range, RGB backlighting with a built-in diffuser. The backlight color indicates the status of the programmed button by providing the user with the option to personalize the color for on, off, or other status feedback. And, due to Vantage's use of laser engraving, only the lettering on each button will be illuminated, maintaining the aesthetic appeal of the dimmer.

Features & Benefits

Modular one to five button options

Backlighting automatically adjusts based on time of day; easily see which scenes are active based on backlit button color or intensity

Custom color palette option to match or mix finishes for trims, buttons, and faceplates
